## DETAILED ACTION

### *Response to Arguments*

1. Applicant's arguments with respect to claims 1-48 have been considered but are moot in view of the new ground(s) of rejection.

### *Claim Rejections - 35 USC § 103*

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-39 are rejected under 35 U.S.C. 103(a) as being unpatentable over Johnson, Jr. (U.S. Patent # 6,819,576) in combination with Johnson, Jr. (U.S. Patent # 6,483,730).

Johnson, Jr. (576) discloses claimed subject matters a power conversion apparatus (figure 2 and 3), including DC link comprising first and second bus (figure 3, item 305a and 305b), a reference bus (figure 3, item GND), first and second DC voltages (figure 3, item V1 and V2), an uninterruptible power supply (Abstract, line 1-5) and a pre charge circuit (figure 3, item 330), an AC source and/or DC source (figure 3, item 10 and 303), a balancer circuit (column 2, line 35-45), an inductor (figure 3, item L1), a first and second

switches (figure 3, item Q1 and Q2), a third switch (figure 3, item S), a common half-bridge circuit (figure 3, item L1, Q1 and Q3), a rectifier circuit (figure 3, item 310).

However Johnson, Jr. (576) does not disclose the utilization technique for a transferring charge from first capacitor to second capacitor, a buck converter and boost converter topology Johnson, Jr. (730) teaches the utilization of the similar technique for a transferring charge from first capacitor to second capacitor (column 4, line 15-21), a buck converter and boost converter topology (column 9-12, line 1-65). It would have been obvious one having an ordinary skill in the art at the time the invention

4. For method claims 40-48, note that under MPEP 21 12.02, the principles of inherency, if a prior art device, in its normal and usual operation, would necessarily perform the method claimed, then the method claimed will be considered to be anticipated by the prior art device. When the prior art device is the same as a device described in the Specification for carrying out the claimed method, it can be assumed the device \*11 inherently perform the claimed process. In re King, 801 F.2d 1324, 231 USPQ 136 (Fed. Cir. 1986). Therefore the previous rejections based on the apparatus will not be repeated.
